Encapsulation Technologies for Electronic Applications (Materials and Processes for Electronic Applications) Haleh Ardebili, Michael Pecht

Electronics are used in a wide range of applications including computing, communication, biomedical, automotive, military and aerospace. They must operate in varying temperature and humidity environments including indoor controlled conditions and outdoor climate changes. Moisture, ionic contamination, heat, radiation and mechanical stresses are all highly detrimental to electronic devices and can lead to device failures. Therefore, it is essential that the electronic devices be packaged for protection from their intended environments, as well as to provide handling, assembly, electrical and thermal considerations.

Currently, more than 99% of microelectronic devices are plastic encapsulated. Improvements in encapsulant materials, and cost incentives have stretched the application boundaries for plastic electronic packages. Many electronic applications that traditionally used hermetic packages such as military are now using commercial-off-the-shelf (COTS) plastic packages. Plastic encapsulation has the advantages of low cost, smaller form factors, and improved manufacturability.

With recent trends in environmental awareness, new environmentally friendly or 'green' encapsulant materials (i.e. without brominated additives) have emerged. Plastic packages are also being considered for use in extreme high and low temperature electronics. 3-D packaging and wafer-level-packaging (WLP) require unique encapsulation techniques. Encapsulant materials are also being developed for micro-electro-mechanical systems (MEMS), bio-MEMS, bio-electronics, and organic light-emitting diodes (O-LEDs).

This book offers a comprehensive discussion of encapsulants in electronic applications. The main emphasis is on the encapsulation of microelectronic devices; however, the encapsulation of connectors and transformers is also addressed. This book discusses 2-D and 3-D packaging and encapsulation, encapsulation materials including environmentally friendly 'green' encapsulants, and the properties and characterization of encapsulants. Furthermore, this book provides an extensive discussion on defects and failures related to encapsulation, how to analyze such defects and failures, and how to apply quality assurance and qualification process for encapsulated packages. This book also provides information on the trends and challenges of encapsulation and microelectronic packages including application of nanotechnology.

- Guidance on the selection and use of encapsulants in the electronics industry, with a particular focus on microelectronics
- Coverage of environmentally friendly 'green encapsulants'
- Practical coverage of faults and defects: how to analyze them and how to avoid them

From reader reviews:

Pamela Garcia:

Why don't make it to be your habit? Right now, try to ready your time to do the important act, like looking for your favorite reserve and reading a e-book. Beside you can solve your condition; you can add your knowledge by the e-book entitled Encapsulation Technologies for Electronic Applications (Materials and Processes for Electronic Applications). Try to stumble through book Encapsulation Technologies for Electronic Applications (Materials and Processes for Electronic Applications) as your buddy. It means that it can to become your friend when you truly feel alone and beside associated with course make you smarter than before. Yeah, it is very fortunated for you personally. The book makes you more confidence because you can know every little thing by the book. So , we should make new experience along with knowledge with this book.

Janet Steele:

Reading a book can be one of a lot of task that everyone in the world loves. Do you like reading book therefore. There are a lot of reasons why people fantastic. First reading a guide will give you a lot of new info. When you read a e-book you will get new information mainly because book is one of various ways to share the information or maybe their idea. Second, reading through a book will make a person more imaginative. When you studying a book especially tale fantasy book the author will bring you to definitely imagine the story how the characters do it anything. Third, you could share your knowledge to other people. When you read this Encapsulation Technologies for Electronic Applications (Materials and Processes for Electronic Applications), you can tells your family, friends in addition to soon about yours e-book. Your knowledge can inspire others, make them reading a book.

Johnny Rogowski:

Is it you actually who having spare time after that spend it whole day by simply watching television programs or just resting on the bed? Do you need something new? This Encapsulation Technologies for Electronic Applications (Materials and Processes for Electronic Applications) can be the respond to, oh how comes? The new book you know. You are consequently out of date, spending your time by reading in this completely new era is common not a nerd activity. So what these publications have than the others?

Carolyn Hoar:

A lot of guide has printed but it takes a different approach. You can get it by web on social media. You can choose the best book for you, science, comedian, novel, or whatever by means of searching from it. It is referred to as of book Encapsulation Technologies for Electronic Applications (Materials and Processes for Electronic Applications). You can add your knowledge by it. Without causing the printed book, it could possibly add your knowledge and make an individual happier to read. It is most crucial that, you must aware about publication. It can bring you from one destination for a other place.
