Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) Volker Michel

Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball focuses on spherical problems as they occur in the geosciences and medical imaging. It comprises the author's lectures on classical approximation methods based on orthogonal polynomials and selected modern tools such as splines and wavelets.

Methods for approximating functions on the real line are treated first, as they provide the foundations for the methods on the sphere and the ball and are useful for the analysis of time-dependent (spherical) problems. The author then examines the transfer of these spherical methods to problems on the ball, such as the modeling of the Earth's or the brain's interior. Specific topics covered include:

- * the advantages and disadvantages of Fourier, spline, and wavelet methods
- * theory and numerics of orthogonal polynomials on intervals, spheres, and balls
- * cubic splines and splines based on reproducing kernels
- * multiresolution analysis using wavelets and scaling functions

This textbook is written for students in mathematics, physics, engineering, and the geosciences who have a basic background in analysis and linear algebra. The work may also be suitable as a self-study resource for researchers in the above-mentioned fields.

From reader reviews:

Jeffrey Roybal:

The book Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) gives you the sense of being enjoy for your spare time. You should use to make your capable more increase. Book can to become your best friend when you getting stress or having big problem using your subject. If you can make studying a book Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) being your habit, you can get far more advantages, like add your personal capable, increase your knowledge about many or all subjects. It is possible to know everything if you like available and read a book Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis). Kinds of book are a lot of. It means that, science e-book or encyclopedia or other people. So , how do you think about this book?

Joyce Greenberg:

The book Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) can give more knowledge and also the precise product information about everything you want. Why then must we leave the good thing like a book Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis)? Several of you have a different opinion about e-book. But one aim this book can give many info for us. It is absolutely proper. Right now, try to closer along with your book. Knowledge or information that you take for that, you are able to give for each other; you could share all of these. Book Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) has simple shape but the truth is know: it has great and big function for you. You can search the enormous world by wide open and read a publication. So it is very wonderful.

Connie Hockaday:

Spent a free time and energy to be fun activity to try and do! A lot of people spent their free time with their family, or their own friends. Usually they performing activity like watching television, going to beach, or picnic in the park. They actually doing same every week. Do you feel it? Would you like to something different to fill your personal free time/ holiday? Can be reading a book could be option to fill your cost-free time/ holiday. The first thing that you ask may be what kinds of guide that you should read. If you want to test look for book, may be the e-book untitled Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) can be good book to read. May be it might be best activity to you.

Mark Guerrero:

Are you kind of stressful person, only have 10 or 15 minute in your day to upgrading your mind proficiency or thinking skill possibly analytical thinking? Then you have problem with the book compared to can satisfy your short time to read it because all this time you only find publication that need more time to be study. Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) can be your answer as it can be read by you actually who have those short free time problems.
