Encyclopedia of Food Microbiology, Three-Volume Set

Encyclopedia of Food Microbiology, Three-Volume Set

The **Encyclopedia of Food Microbiology, Three-Volume Set** is the largest comprehensive reference source of current knowledge available in the field of food microbiology. Consisting of nearly 400 articles, in three volumes, written by the world's leading scientists, the **Encyclopedia** presents a highly structured distillation of the whole field--from *Acetobacter* to *Zymomonas*. Each article in the **Encyclopedia** is approximately 4000 words in length and contains tables, line drawings, black-and-white photographs, or electron micrographs, where appropriate. The articles critically review the current state of knowledge of the topic in question. A list of suggested further reading is provided at the end of each article allowing the interested reader to research the subject more closely.

The **Encyclopedia** is written at the research/technician level and could be used as a coursebook. Practitioners in industry, analysts, and similar professionals will especially be interested in the methodologies and techniques theme.

Includes 358 articles in the following areas of Food Microbiology:

- * Food-borne organisms: their characteristics and importance
- * Micro-organisms in action
- * Detection and enumeration

Key Features:

- * Provides an alphabetical article listing and a listing arranged according to subject area
- * Offers further reading lists in each article which allows easy access to the primary literature
- * Contains extensive cross-referencing and complete subject index in each volume
- * Includes many figures and tables illustrating the text and color plate sections in each volume

Articles cover:

- * All the major genera/groups of food spoilage and food-borne disease organisms
- * The beneficial activities of bacteria and fungi in the food industry
- * Industrial aspects of microbiology
- * The microbiology of specific commodities
- * Classical methods for the enumeration of bacteria and fungi
- * Total colony counts for the detection and/or enumeration of specific genera/species
- * MPN procedures, dye reduction tests, and direct microscopic counts
- * Recent methods for examining foods, e.g. automated PCR and ELISAs
- * Current tests for individual genera such as API carbohydrate strips
