TNM Classification of Malignant Tumours

TNM Classification of Malignant Tumours

TNM Classification of Malignant Tumours, 7th Edition provides the latest, internationally agreed-upon standards to describe and categorize cancer stages and progression. Published in affiliation with the International Union Against Cancer (UICC), this authoritative guide contains important updated organ-specific classifications that oncologists and other professionals who manage patients with cancer need to accurately classify tumours for staging, prognosis and treatment.

The major alterations addressed in the *7th Edition* concern carcinomas of the oesophagus and the gastroesophageal junction, stomach, lung, appendix, biliary tract, skin, and prostate. In addition, there are several entirely new classifications:

- gastrointestinal carcinoids (neuroendocrine tumours)
- gastrointestinal stromal tumour
- upper aerodigestive mucosal melanoma
- Merkel cell carcinoma
- uterine sarcomas
- intrahepatic cholangiocarcinoma
- adrenal cortical carcinoma.

A new approach has also been adopted to separate anatomical stage groupings from prognostic groupings in which other prognostic factors are added to T, N, and M categories. These new prognostic groupings, as well as the traditional anatomical groupings, are presented for oesophageal and prostate carcinomas.
