# Journeys to Data Mining: Experiences from 15 Renowned Researchers

**Journeys to Data Mining: Experiences from 15 Renowned Researchers**

Data mining, an interdisciplinary field combining methods from artificial intelligence, machine learning, statistics and database systems, has grown tremendously over the last 20 years and produced core results for applications like business intelligence, spatio-temporal data analysis, bioinformatics, and stream data processing.

The fifteen contributors to this volume are successful and well-known data mining scientists and professionals. Although by no means an exhaustive list, all of them have helped the field to gain the reputation and importance it enjoys today, through the many valuable contributions they have made. Mohamed Medhat Gaber has asked them (and many others) to write down their journeys through the data mining field, trying to answer the following questions:

1. What are your motives for conducting research in the data mining field?
2. Describe the milestones of your research in this field.
3. What are your notable success stories?
4. How did you learn from your failures?
5. Have you encountered unexpected results?
6. What are the current research issues and challenges in your area?
7. Describe your research tools and techniques.
8. How would you advise a young researcher to make an impact?
9. What do you predict for the next two years in your area?
10. What are your expectations in the long term?

In order to maintain the informal character of their contributions, they were given complete freedom as to how to organize their answers. This narrative presentation style provides PhD students and novices who are eager to find their way to successful research in data mining with valuable insights into career planning. In addition, everyone else interested in the history of computer science may be surprised about the stunning successes and possible failures computer science careers (still) have to offer.

**From reader reviews:**

**Annette Morrison:**

In this 21st millennium, people become competitive in every single way. By being competitive at this point, people have do something to make these people survives, being in the middle of the crowded place and notice by simply surrounding. One thing that at times many people have underestimated it for a while is reading. That's why, by reading a e-book your ability to survive raise then having chance to stand up than other is high. To suit your needs who want to start reading a book, we give you this specific Journeys to Data Mining: Experiences from 15 Renowned Researchers book as nice and daily reading guide. Why, because this book is usually more than just a book.

**Carlos Thornton:**

The book untitled Journeys to Data Mining: Experiences from 15 Renowned Researchers contain a lot of information on it. The writer explains your girlfriend idea with easy approach. The language is very simple to implement all the people, so do not really worry, you can easy to read that. The book was compiled by famous author. The author brings you in the new period of literary works. It is possible to read this book because you can please read on your smart phone, or model, so you can read the book in anywhere and anytime. In a situation you wish to purchase the e-book, you can open up their official web-site and order it. Have a nice examine.

**Helen Butts:**

You can get this Journeys to Data Mining: Experiences from 15 Renowned Researchers by visit the bookstore or Mall. Just viewing or reviewing it could possibly to be your solve issue if you get difficulties on your knowledge. Kinds of this publication are various. Not only by written or printed but in addition can you enjoy this book by e-book. In the modern era like now, you just looking of your mobile phone and searching what their problem. Right now, choose your current ways to get more information about your e-book. It is most important to arrange yourself to make your knowledge are still up-date. Let's try to choose proper ways for you.

**Bradley Ray:**

A lot of people said that they feel bored stiff when they reading a e-book. They are directly felt the item when they get a half regions of the book. You can choose typically the book Journeys to Data Mining: Experiences from 15 Renowned Researchers to make your own personal reading is interesting. Your own personal skill of reading ability is developing when you similar to reading. Try to choose very simple book to make you enjoy to read it and mingle the impression about book and examining especially. It is to be very first opinion for you to like to start a book and examine it. Beside that the reserve Journeys to Data Mining: Experiences from 15 Renowned Researchers can to be a newly purchased friend when you're feel alone and confuse with the information must you're doing of their time.
